UC DAVIS
Continuing and Professional Education

Slide 1: This simply is not true!

This simply is not true!

Myth: Having a lot of work-in-process is the *best* way to get more done

Learning Objectives

Discuss effective strategy to increase **productivity**

Identify 5 **Thieves of Time**

Address challenges from stakeholders in setting **limits on work-in-process**

Combine Tools for Stronger Performance

Maintain work-in-process **(WIP) limits**

Combine WIP with **visual displays**

Use **feedback loops** back to dev teams

The 5 Thieves of Time

1. Too much work-in-process
2. Conflicting priorities
3. Unknown dependencies
4. Unplanned work
5. Neglected work

How to Apply WIP Limits

Only work on a set number of things at once

Start next thing only after **finishing something**

You may have to **challenge** your own **beliefs and instincts**

This Will Take Time

It will get **harder** before it gets better

Past work-arounds **masked problems**

Now you'll face the **elephant in the room**

People May Resist at First

Applying WIP limits may cause **frustration**

Persist until results **prove effectiveness**

Slide 8: Implement the Entire System

Implement the Entire System

Limit work in process

Visually display work

Use feedback loops
